AGENDA

IMPORTANCE OF MANAGEMENT TRAINING

Prepares New
Managers for
Leadership
Responsibilities

Strengthens
Performance

Increases
Engagement

Builds Self-
Awareness

Supports Long-
term Succession
Planning

Transitioning into a management role requires a fundamentally different skill set than that of an individual contributor. New managers are expected to lead teams, manage performance, resolve conflict, and align employee efforts with organizational strategy. Without structured training, many managers struggle with this transition, which can negatively impact morale, productivity, and organizational performance.

Leadership development research emphasizes that intentional, structured programs are more effective than informal learning alone. Bialek and Hagen (2022) found that cohort-based leadership development programs enhance self-awareness, accountability, and leadership capability among high-potential employees. These structured programs help organizations build stronger leadership pipelines and prepare managers to handle complex interpersonal and strategic responsibilities. In addition, access to training and development opportunities has been shown to significantly increase employee engagement. Hassett (2022) found a positive relationship between access to training and work engagement across the federal workforce. Notably, employees who reported having access to training and development opportunities demonstrated engagement levels approximately 15 percentage points higher than those who

did not. Because engaged employees demonstrate greater energy, persistence, and commitment, this finding highlights the strategic importance of management training.

Therefore, management training should be viewed as a strategic investment that strengthens leadership effectiveness, enhances engagement, and supports long-term organizational sustainability.

KNOWLEDGE POTENTIAL NEW MANAGERS NEED

- Leadership Theories
- Organizational Behavioral
- Communication & Conflict
- Employee Development
- Strategic Planning & Decision-making

Knowledge refers to the theoretical understanding of concepts, frameworks, and principles that inform effective leadership behavior (Indeed Editorial Team, 2025). Before managers can apply leadership practices effectively, they must understand foundational concepts that shape organizational performance.

New managers need knowledge of leadership theories and styles. Understanding transformational, transactional, and situational leadership approaches allows managers to adapt their style depending on team needs and organizational context. Second, knowledge of organizational behavior is essential. Managers must understand motivation, group dynamics, and workplace psychology to lead diverse teams effectively (Ahmed, 2024). Third, communication theory and conflict management principles are critical. Research on leadership development emphasizes that communication competence and interpersonal awareness are foundational components of successful leadership programs (Bialek & Hagen, 2022). Without theoretical understanding of communication and conflict resolution, managers may rely on reactive rather than strategic responses. Additionally, managers need knowledge of talent management systems, including performance evaluation processes, succession planning, and employee development frameworks. Bialek and Hagen (2022) highlight that

leadership development programs that intentionally integrate structured feedback and development planning strengthen long-term leadership pipelines. Finally, managers must understand strategic planning frameworks and data-driven decision-making principles. Knowledge of how decisions align with organizational mission ensures managers operate with both operational and strategic awareness.

SKILLS POTENTIAL NEW MANAGERS NEED

- Effective Communication
- Coaching & Performance Delivery
- Conflict Resolution
- Emotional Intelligence (EI)
- Delegation & Accountability

While knowledge provides understanding, skills represent the demonstrated ability to apply that knowledge effectively in real-world situations (Indeed Editorial Team, 2025). Knowledge answers “what and why,” while skills answer “how.” Effective management training must intentionally develop both.

Effective communication is one of the most critical management skills. This includes active listening, clarity in expectations, and the ability to tailor communication to different audiences. Structured development programs significantly improve interpersonal effectiveness and leader communication behaviors (Bialek & Hagen, 2022). Coaching and performance delivery are also essential skills. Managers must be able to translate evaluation data into constructive developmental conversations. Programs incorporating 360-degree feedback and peer coaching have been shown to improve self-awareness and accountability, both of which enhance leadership effectiveness (Bialek & Hagen, 2022). Conflict resolution is another critical applied skill. Managers must navigate interpersonal disagreements. This requires practical application of conflict management learned concepts. Emotional intelligence and self-awareness are particularly important. Bialek and Hagen (2022) found that leadership programs emphasizing reflection and feedback significantly improved

participants' self-awareness, which directly impacts leadership effectiveness. Lastly, delegation and accountability management require managers to apply both strategic knowledge and interpersonal skill. The ability to assign responsibility appropriately and follow through on expectations is essential for team performance.

Training Setting: Hybrid

Live Virtual Training Days (Zoom)

In-Person Centralized Workshops (Travel-Supported)

Self-paced online Learning Modules (Continual Training)

Because XYZ is a large organization with employees located across the United States, a blended training model is the most practical and effective approach. Many employees work remotely which means it must ensure leadership consistency as individuals move into management roles.

The program will begin with 4–6 weeks of live virtual training sessions conducted via Zoom. Having this phase virtual allows managers to remain in their roles while building knowledge potential new managers need. Siqueira (2023) explains that structured formal training is more effective than relying solely on informal learning-by-doing approaches, as it reduces inefficiencies and ensures consistent knowledge acquisition. After completing the live virtual learning phase, managers will attend a centralized in-person workshop. XYZ will fly participants to a centralized corporate location for a multi-day leadership training. This workshop will focus on developing the potential new managers skills. Cohort-based leadership development programs have been shown to improve self-awareness, accountability, and leadership effectiveness through structured interaction and reflection (Bialek & Hagen, 2022). The in-person component also helps strengthen relationships across regions and reinforces company culture. Managers will transition into self-paced online learning

modules for ongoing development. This final phase supports long-term leadership growth rather than treating management training as a one-time event.

Employee Return On Investment (ROI)

From the employee perspective, leadership training represents a direct investment in career growth and professional effectiveness. Geerts (2024) demonstrates that well-designed leadership development programs improve participants' knowledge, skills, capabilities, self-efficacy, engagement, and job satisfaction. Increased self-efficacy (confidence in one's ability to perform leadership responsibilities effectively) has been consistently linked to stronger leadership performance and workplace effectiveness. Employees who complete structured leadership training gain practical competencies in communication, coaching, conflict resolution, and strategic decision-making. These enhance day-to-day effectiveness and reduce the stress often associated with first-time management roles. Leadership development has also been correlated with improved engagement and overall performance (Geerts, 2024). When new managers feel competent and supported, they are more likely to remain committed to the organization and motivated to perform at a high level. Additionally, participation in formal training programs increases professional credibility and promotability. Employees who demonstrate mastery of leadership are better positioned for advancement opportunities.

Employer Return On Investment (ROI)

Improved
Effectiveness &
Performance

Increased
Engagement &
Retention

Reduced
Absenteeism &
Turnover Costs

Stronger Succession
Planning & Internal
Promotion Pipelines

Measurable
Performance
Outcomes

From the employer perspective, leadership development represents a strategic investment in organizational effectiveness and long-term performance.

Leadership development programs can produce outcomes beyond the individual level, including decreased absenteeism, increased staff retention, improved engagement, and stronger organizational performance (Geerts, 2024). When managers are equipped with the necessary knowledge and skills to lead, their teams are more productive and aligned with organizational goals. It is also closely tied to employee retention. Organizations that prioritize leadership training displays investment in their workforce. This can improve morale and reduce voluntary turnover. Reduced turnover carries direct financial implications, as replacing managers can require substantial recruitment, onboarding, and productivity replacement costs. Additionally, structured development strengthens succession planning efforts. By preparing internal candidates for leadership roles, organizations reduce reliance on external hiring and preserve organizational knowledge. However, leadership training does not automatically produce these outcomes. Many programs underperform when learning is not effectively transferred to the workplace (Geerts, 2024). Therefore, implementing an evidence-based training model increases the likelihood that

development translate into measurable organizational benefits.

INSTRUCTIONAL OBJECTIVES

The instructional objectives for this management training program are intentionally designed to address core domains of learning. Wei et. al (2021) emphasizes that comprehensive training must incorporate all three domains to promote meaningful learning and sustained performance improvement (Wei et al., 2021). These objectives are:

- Cognitive objectives focus on knowledge acquisition and comprehension of leadership concepts. These include understanding leadership theories, communication strategies, organizational behavior frameworks, and performance management principles, all of which are foundational for effective decision-making.
- Behavioral objectives emphasize demonstrable changes in managerial actions and skills. For example, managers should be able to conduct performance feedback conversations, resolve workplace conflict, and lead team meetings effectively. These outcomes are observable and measurable, ensuring that training translates into practical application in the workplace.
- Affective objectives focus on attitudes, values, and internal dispositions (confidence, motivation, professional identity as a leader, etc.). Effective leadership development should influence how they feel and how committed

they are to leadership roles (Wei et al., 2021).

Training Materials

Live Virtual Training

PowerPoint Presentation
Digital Training Manuals (PDF)
Leadership Tools & Templates
Recorded Zoom Session

In-Person Workshop

Printed Workbook
Facilitator Guides & Structured Agenda
Feedback Forms

Continual Learning

LMS-Based Modules
External Learning Platforms
Leadership Development Plan

During the live virtual training sessions, managers will receive digital materials, including structured PowerPoint presentations and a comprehensive PDF training manual. Downloadable templates and checklists will allow managers to apply learning directly in their roles. Recorded Zoom sessions will be available for review to reinforce key concepts. The in-person workshop will incorporate printed participant workbooks and facilitator guides to support interactive activities and structured discussions. Having physical materials during the workshop promotes engagement and allows participants to document insights and action plans. Evaluation forms and feedback tools will also be used to assess learning and program effectiveness. For continual learning, managers will have access to LMS-based modules that reinforce leadership topics and provide refresher training. The organization may also leverage external learning platforms, such as Coursera or Sophia, to allow managers to pursue additional development in specialized areas. The Leadership Development Plan template will serve as an ongoing tool to track progress, set goals, and support accountability.

CLOSING

“Leadership is not purely an innate quality with which one is born, but rather that leader performance is largely attributable to acquired experiences and training”
(Geerts, 2024, para. 1).

This quote reinforces the message of this training proposal: effective leadership is developed through intentional learning, structured experiences, and ongoing support. By implementing a hybrid, evidence-based management training program, XYZ can equip new managers with the knowledge, skills, and confidence needed to drive performance and engagement. Investing in leadership is a strategic investment in the organization’s long-term success.
